

Fixing a Small Bug

The demo application has a **small bug** at the moment: When adding multiple values, those values are added as strings instead of numbers.

Fixing it is easy though, simply make sure you enforce a number conversion:

In `ExpenseForm.js`, just change

```
1. const expenseData = {  
2.   title: enteredTitle,  
3.   amount: enteredAmount,  
4.   date: new Date(enteredDate),  
5. };
```

to

```
1. const expenseData = {  
2.   title: enteredTitle,  
3.   amount: +enteredAmount,  
4.   date: new Date(enteredDate),  
5. };
```

in the `submitHandler` function.
