

React 18 & This Section

This section was recorded with React 17 - therefore, in `index.js`, you will see slightly different code (that is the only change though - everything you learn in this section still applies!).

You can update the project to React 18 with these two steps:

1) `npm install --save react@latest react-dom@latest`

2) Update `index.js`:

Replace

```
1. ReactDOM.render(  
2.   <Provider store={store}>  
3.     <BrowserRouter>  
4.       <App />  
5.     </BrowserRouter>  
6.   </Provider>, document.getElementById('root'));
```

with

```
1. const root = ReactDOM.createRoot(document.getElementById('root'));  
2. root.render(  
3.   <Provider store={store}>  
4.     <BrowserRouter>  
5.       <App />  
6.     </BrowserRouter>  
7.   </Provider>);
```

That's all - as mentioned, this is the only change. Everything you learn in this section is up-to-date with the latest version of React.
