Exercise Hints

Below, you find hints that will hopefully help you if you're not sure how to start or if you're getting stuck.

Of course definitely also explore my solution lectures if you're not able to solve the exercise on your own though - simply retry the exercise a few days or weeks later then!

Hints:

- Carefully analyze the finished app (and its behavior) I showed you in the previous lecture
- You can structure the app however you want but **I'll build & use components with the following names**:
    - `AddUser`
    - `UsersList`
    - `Button`
    - `Card`
    - `ErrorModal`
- `Button` and `Card` will essentially be "wrapper components"
- Take a look at the [CSS files](#) I'll use to get some hints regarding the JSX code I might be using in those components
- Don't forget to **"lift state up"**
